

Summary

Preface

A year after the signing of the Stabilization and Association Agreement between the Republic of Macedonia and the European Communities and their Member States, an overview can be made of the process of European integration in the Republic of Macedonia.

The undertaken activities within the frame of the process of approximation of the national legislation to the EU legislation in 2001 have been carried out in continuation, shifting the focus on the implementation issues of the new legislation and the need of strengthening of capacity of the existing institutions, or building of new ones.

The Programme for approximation of legislation adopted by the Government of the Republic of Macedonia in 2001, had an important role in the last period in giving guidelines, contents, and dynamics of the law approximation process. The relevant ministries worked intensive on introduction and interpretation of the EU legislation in their areas. To this end the Programme had also considerable didactic impact. However, the most important benefit of this document is that by its practical implementation, the problems were clearly detected, and the guidelines were developed for a continuous improvement of the overall process.

Even since its preparation and adoption by the side of the Government of the Republic of Macedonia, it was foreseen to make an annual revision of the Programme for Approximation of Legislation. The present document is the first revision of the Programme. The Programme for Approximation of Legislation 2002, according to its structure is partially different from the previous Programme. The reason is to have a better overview of the content and accuracy of data, as well as to facilitate the monitoring of the law approximation process.

Preparation of the Programme for Approximation of Legislation 2002 was followed by activities for strengthening of existing institutions where the harmonization of the legislation process is performed - preparation of the Procedural Manual for approximation of the legislation, as well as to design and install a database and to apply the information technology, that are necessary for development of monitoring mechanisms of the overall process.

Contents and objective of the document

The document is aiming to give an overview of the present status, institutions, mechanisms and planned activities in the law approximation process.

It consists of the following parts:

- *Programme for approximation of the national legislation to the EU legislation - 2002*
- *Institutional infrastructure required for the process of approximation of the national legislation with the EU legislation*
- *Procedural Manual for approximation to the EU legislation*

Programme for approximation of the national legislation to the EU legislation - 2002

The Programme is divided in 27 chapters that reflect the structure of the negotiation chapters with the European Commission. In accordance with that, a division in working groups and subgroups has been made, which will work on harmonization of the legislation in these areas.

The Programme keeps the same form of tables, with 10 columns containing data with the following explanations.

- **Column 1 (Article SAA/IA)** - contains the Article of the Stabilization and Association Agreement, or the Interim Agreement from where the requirement for approximation of the national legislation with the EU legislation derives.
- **Column 2 (Deadline for the implementation)** - the column contains the deadline deriving from the SAA when the approximation of the legislation with the EU legislation should be realized.
- **Column 3 (Responsible body)** - contains the responsible body of the activities.
- **Column 4 (EU legal act)** - EU legal act that should be transposed in the national legislation.
- **Column 5 (National legislation)** - contains data of the national legislation where the EU legal act should be transposed.
- **Column 6 (undertaken steps until now)** - this is a new column. It defines the 7 steps describing the exact status of the procedure:
 - 0 - it means that it has not been harmonized yet with the EU legislation - there is a need of harmonization
 - 1 - law drafting, amending and appending of a law, or by-law (development of studies and analyses of the impact assessment)
 - 2 - it means that the by-law is at the stage of adoption in a line ministry (in case when the legal authorization of the adoption of the act is the responsibility of the minister)
 - 3 - it means that the by-law is in the governmental procedure, when the legal authorization for adoption of the act is the responsibility of the Government
 - 4 - it means that the law proposal/amending and appending of the law are in the governmental procedure
 - 5 - it means that the law proposal/amending and appending of the law are in the parliamentary procedure
 - 6 - it means that the law/amending and the appending of the law is enacted (adopted by-law)
 - 7 - implementation (the law is completely enacted, the relevant institutions are fully operational)
- **Column 7 (adopted by the Government)** - contains the indicative deadline for adoption of the legal act by the Government of the Republic of Macedonia
- **Column 8 (adopted by the Parliament)** - contains the indicative deadline for adoption of the legal act by the Parliament of the Republic of Macedonia
- **Column 9 (translation status)** - contains the translation status of the EU legal act (0-not translated, 1-in the phase of translation, 2-translated)
- **Column 10 (goal and impact)** - contains the goal to be reached by the transposition of the EU legal act in the national legislation, and the impact on administration, legal system and economy

Development of the mechanism for monitoring of the implementation of the Programme

This structure of the revised Programme made possible to develop **a monitoring mechanism** for following the progress of the implementation that has a form of **a report** and represents an integral part of the Programme. By the use of the information technology, this report could automatically generated and provides opportunity for selection by different parameters. This considerably facilitates the coordination of the process, enables identification of back-logs, but also the positive changes. It is planned to prepare this kind of reports on monthly basis.

Institutional infrastructure required for the process of approximation of the national legislation to the EU legislation

This part of the document gives a review of the existing institutions and bodies in the Republic of Macedonia that are directly involved in the law approximation process. In the last period, the major part of the activities were focused on strengthening of their capacities and more intensive involvement in the realization of the Programme for approximation with the EU legislation.

Procedural Manual for approximation to the EU legislation

This Manual is aiming to facilitate better application of the activities of the law approximation process. The Manual gives clear guidelines for individuals and bodies included in the process of approximation of the legislation and explains how it should be proceeded in order to achieve optimal organization, coordination, information and monitoring of their activities.

The procedural Manual covers:

- *Organization and obligations of the working groups and sub-working groups;*
- *The role of ministries and their European integration units;*
- *Obligation to report to the Working Committee for European Integration, and the Sector for European Integration;*
- *Responsibilities pursuant to the Article 66 of the Rules of procedure of the Government of the Republic of Macedonia for harmonization of the national legislation with the EU legislation.*

This concept of the Manual requires coordination with the members of the Subcommittee for approximation of the legislation and the European Integration units, with the aim to guarantee that the defined procedures will be operational, adjusted to the current situation, and to be easily applicable.

Perspectives of the law approximation process

It can be concluded that in the last year there is a substantial improvement in the overall law approximation process. In the future, the Programme for approximation to the EU legislation will be continuously upgraded following the changes of the EU legislation from one side, and on the other side a progressive inclusion of the part of implementation giving the concrete data for engagement of financial resources, strengthening of institutions, and data for the need of technical assistance. The Republic of Macedonia has started the process by development of the Basis of the programme for harmonization in the priority areas as defined in the Article 68 from the SAA (competition and the state aid, public procurement, industrial and intellectual property, personal data protection, standardization, metrology, accreditation and certification).

The process will be continuously strengthened with the use of the information technology for its follow up, as well as with translation of EU legislation. Translation of EU legislation in the last period was supported with the supply of the specialized software and development of translation methodology.

It is of great importance taking into consideration all those documents while preparing the General Programme of the Government of the Republic of Macedonia on annual basis and planning the budget in direct correlation with the process of the European integration in the Republic of Macedonia.

Besides all the efforts of the Republic of Macedonia to harmonize its national legislation with EU legislation, the success of this process very much depends on the support by European Commission and EU member states. One could refer to the mechanisms applied in the candidate countries for accelerating the process of harmonization of legislation (e.g. screening exercise, twinning, access to TEIEX, etc.) which are not available to Republic of Macedonia yet.

WORKING STRUCTURE OF NPAL

01 FREE MOVEMENT OF GOODS

- 01.01 Standardization (technical standardization)
- 01.02 Standardization (Law on foodstuffs)
- 01.03 Chemical products
- 01.04 Health regulations (general)
- 01.05 Medicines veterinary use
- 01.06 Tobacco products

02 COMPETITION AND STATE AID

- 02.01 Competition Law
- 02.02 State aid
- 02.03 State aid to industry

03 SOCIAL POLICY AND EMPLOYMENT

- 03.01 Equal opportunities
- 03.02 Disabled persons
- 03.03 Health and safety at work

04 AGRICULTURE

- 04.01 Plants, plant products, plant protection products and pesticide
- 04.02 Agricultural markets (fruits and vegetables)
- 04.03 Seeds and propagating material
- 04.04 Trade with live animals, semen, ova and embryos
- 04.05 Trade with animal products
- 04.06 Control measures
- 04.07 Marketing of animal products
- 04.08 Measures covering more than one sector
- 04.09 Import of animals and animal products
- 04.10 Control and protection system
- 04.11 Breeding stock and pure-bred animals
- 04.12 Animal welfare

- 04.13 Agricultural markets for beef, veal, sheep and goat meat
- 04.14 Animal nutrition
- 04.15 Wine and distillers
- 04.16 Hunting

05 TRANSPORT

- 05.01 Road traffic
- 05.02 Transport infrastructure
- 05.03 Access to the market
- 05.04 Fiscal and social harmonization

06 TELECOMMUNICATIONS, CULTURE AND AUDIO-VISUAL SERVICES

- 06.01 Telecommunications and media
- 06.02 Culture
- 06.03 Audio-visual services and informatic society

07 ENVIRONMENT

- 07.01 Horizontal legislation concerning the whole sector of environment
- 07.02 Legislation for management of water quality
- 07.03 Legislation for air quality
- 07.04 Waste
- 07.05 Nature protection and nature resources
- 07.06 Noise
- 07.07 Chemical products
- 07.08 Nuclear safety and radiation protection
- 07.09 Control of industrial pollution and management with risk
- 07.10 Genetic modified organisms

08 DIRECT TAXATION

- 08.01 Value added tax
- 08.02 Direct taxation

09 PUBLIC PROCUREMENT

- 09.01 Public procurement
- 09.02 Public works
- 09.03 Public services
- 09.04 Public utilities
- 09.05 Revision procedures

10 FREE MOVEMENT OF SERVICES

- 10.01 Financial institutions
- 10.02 Securities
- 10.03 Investment Funds
- 10.04 Insurance
- 10.05 Cross-border funds transfer
- 10.06 Financial control
- 10.07 Tourism

11 JUSTICE AND HOME AFFAIRS

- 11.01 Co-operation
- 11.02 Co-operations - judiciary
- 11.03 Drugs, terrorism and weapons import
- 11.04 Money laundry
- 11.05 Personal data protection

12 COMPANY LAW AND ACCOUNTANCY

- 12.01 Harmonization of company law
- 12.02 Accountancy

13 CONSUMER PROTECTION AND HEALTH PROTECTION

- 13.01 Consumer protection; Liability for defective products;
- 13.02 Safety regulations

18 EDUCATION, SCIENCE AND TECHNOLOGY

- 14.01 Education (general)
- 14.02 Access to community programmes for research and development

14.03 Recognition of professional qualifications

19 INTELLECTUAL, INDUSTRIAL AND COMMERCIAL PROPERTY

15.01 Patents

15.02 Trade marks

15.03 Industrial design

15.04 Geographical indicators and indicators of origin

15.05 Topography of integral circuits

15.06 Copyrights and related rights

16 CUSTOMS UNION

16.01 Excise

16.02 Customs

16.03 Introduction of common foreign tariff

17 FREE MOVEMENT OF PERSONS

17.01 Schengen agreement (visa policy, immigration, asylum)

17.02 European citizenship

17.03 Right to stay

17.04 Social insurance

17.05 Labour legislation

17.06 To acquire and enjoy ownership rights on real property

17.07 Vocational training

18 SMALL AND MEDIUM-SIZED ENTERPRISES

18.01 Aid to small and medium-sized enterprises

19 REGIONAL POLICY AND CO-ORDINATION OF STRUCTURAL ELEMENTS

19.01 Access to regional aid

20 FOREIGN RELATIONS AND DEVELOPMENT POLICY

20.01 Relations with third countries

20.02 Trade policy

20.03 International agreements

21 COMMON FOREIGN AND SECURITY POLICY

21.01 Neutrality

21.02 Relations with neighbour countries

22 FINANCIAL AND BUDGET REGULATION

22.01 EU aid

22.02 EU duties

23 STATISTICS

23.01 Managing EU criteria

24 FREE MOVEMENT OF CAPITAL

24.01 Liberalization of movement of capital and interest rates

24.02 Liberalization of foreign payments

24.03 Secondary residencies

25 ECONOMIC AND MONETARY UNION

25.01 Inflation

25.02 Budget deficit

25.03 Public deficit

25.04 Long-term interest rates

25.05 European central bank (status and role of central banks in Member states)

26 ENERGY

26.01 General principles and programmes

26.02 Coal

26.03 Electricity

26.04 Oil and gasses

26.05 Other energy sources

26.06 Ecological aspects

27 FISHERY

- 27.01 Cannery (management)
- 27.02 Organization of the market
- 27.03 Fishery products

EXPLANATION OF THE COLUMNS:

- 1** Article according to Stabilization and association Agreement / Article according to Interim Agreement (SAA/art; IA/art;
- 2** Deadline for implementation SAA/IA
- 3** Responsible body/ institution
- 4** EU Legal Act
- 5** National legislation
- 6** Steps undertaken in the transposition procedure:
 - 0 Law or measure conflicting with EU law - needs modification
 - 1 Drafting procedure, amending and completing the law, by law
(Conceptual Analysis, RIA, Dossier agreed by minister(s))
 - 2 Secondary legislation in progress within the Ministry (when responsibility of adoption is with ministry)
 - 3 Secondary legislation in Governmental procedure (when responsibility of adoption is with Government)
 - 4 Draft law proposal in Governmental procedure
 - 5 Draft law proposal in Parliamentary procedure
 - 6 Enacted (or adopted in case of by-law)
 - 7 Implementation (law fully implemented, administrative body in function)
- 7** Planned date for Governmental procedure (Qrt/year)
- 8** Indicative date for Parliament procedure (Qrt/ year)
- 9** Status of translation of the EU act: 0 - not translated; 1 - in progress; 2 - translated;
- 10** Short comment on:
 - (a) goal of the EU act
 - (b) impact on their national legislative;

(v) international cross-references, problems with harmonisation etc.,

Part II - Institutional infrastructure for conduct of the process for approximation of the national legislation with the EU legislation

In the past period there were continuous efforts in direction to the improvement of the institutional framework for realization of the process of approximation with the European legislation. In addition, an Organization Chart is given where the coordination process of approximation of the National Legislation with the EU Legislation can be observed, as well as all institutions involved in this process.

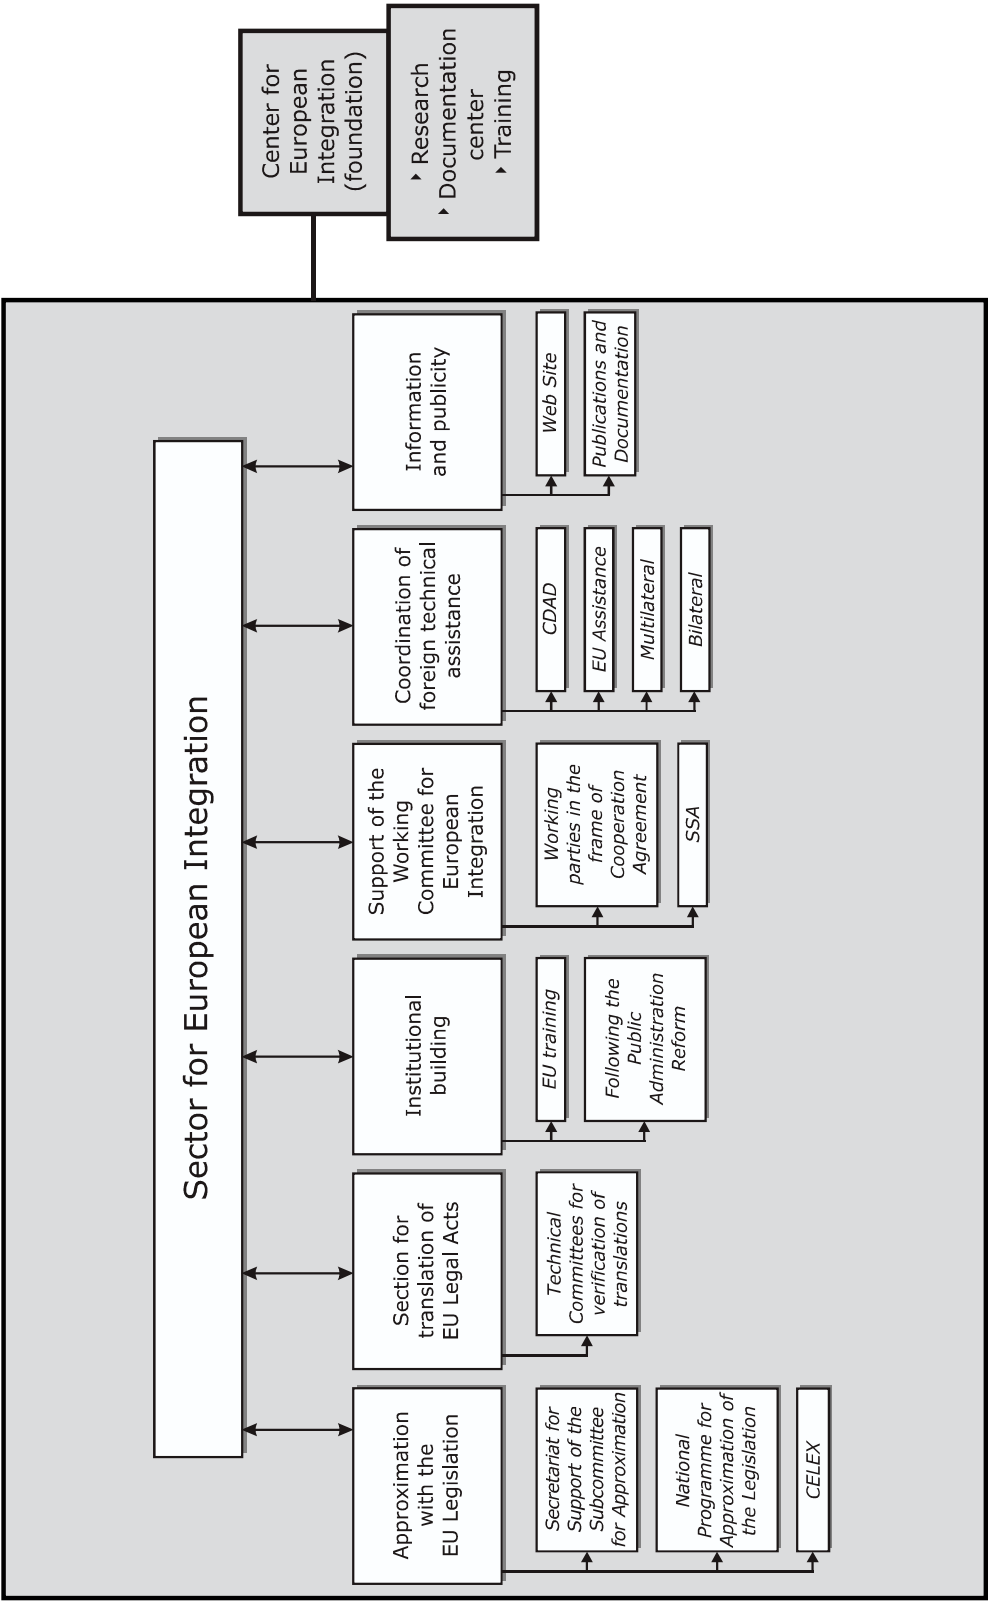

The institutional structure of the process of approximation of the legislation of Republic of Macedonia is composed of the below listed elements:

1. Vice President of the Government of Republic of Macedonia who is in charge for the European integration. He gives great political significance to the complete process of European integration.
2. Working Committee for European Integration. It is a distinguished political operational body that gives a global direction of the complete flow of the process of the European integration in Republic of Macedonia.
3. Sector for European Integration at the Government of the Republic of Macedonia. The main competence of the Sector for European Integration is organization, coordination and synchronization of the process of European integration. It is consisted of six units which are executing the following assignments: horizontal coordination of the approximation of the domestic Legislation with the one of EU, translation of the European legislative acts, institutional superstructure, Secretary of the Working Committee for European Integration, coordination of foreign technical aid, information and publicity (Organization Chart as shown below).
4. The unit for Approximation of the domestic Legislation with the one of EU in the frames of the Sector of European Integration is in charge for the coordination and synchronization of the process of approximation of the domestic Legislation. At the same time this Section is also a Secretary to the Subcommittee of the Working Committee for European Integration for harmonization of the domestic Legislation with the one of EU.
5. Subcommittee for Harmonization of the domestic Legislation with the one of EU is a central coordination body, the engine of the process of approximation. It consists of 33 representatives from all the Ministries and the Secretary of Legislation. One of the crucial functions of this body is the preparation of the Programme for Approximation of the Legislation and Coordination of the Work of the Working Groups for Approximation.
6. Secretary of Legislation. This body has a significant role in the whole process. Namely, beside its primary function, the evaluation of the approximation of the new legal acts with the Constitution of Republic of Macedonia, this body is having the function for verification of the new legal acts in reference with their approximation with the EU Legislation.
7. The Working Groups for approximation of the legislation are consisted of representatives of the Ministries and external experts from universities, the Chamber of Commerce, Economy and other institutions. They are directly in charge for preparation of the new legislation taking into account the European Legislation in the given areas.
8. National experts at directives. They are the last link in the chain of the whole structure. The members of the Working Groups are the same and they are doing the essential task on approximation of the domestic Legislation with the one of EU via direct transposing of the EU Directives and other legal acts which are in their competency.

SCHL:	Sub-Committee for Harmonisation of Legislation
SEI:	Sector for European Integration
UAL:	Unit for Approximation of the Legislation
UEI:	Units for European Integration of the line ministries
WCEI:	Working Committee for European Integration
WG:	Working Group
Sub-WG	Sub-Working Group

INTRODUCTION

The SEI has prepared this Procedural Manual aimed at better implementing legal approximation activities. The Manual will provide clear guidance to officials and bodies involved in the approximation process and explain how they should proceed in order to achieve optimum organisation, co-ordination, reporting and monitoring of their activities. The conception of such a Manual demands co-ordination with counterparts in the Sub-Committee for Harmonisation of Legislation and the Units for European Integration in the line ministries in order to guarantee that the defined procedures will be workable, adapted to the present situation, easy to apply and that once adopted they will be implemented.

It takes into account the preliminary steps contained in the National Programme for Approximation of Legislation and Matrix of June 2001 and draws on the results of the review of existing processes, as reported in the “Gap Analysis and Recommendations on NPAL Procedures and Related Procedures” of 14th November 2001.

A first Workshop was organised on 19th December 2001. The SEI collected feedback information and held internal meetings on the Procedural Manual where remarks made during the Workshop were taken into account and the document reviewed. The reviewed version was presented during the 2nd Workshop organised on 27th February 2002. The Procedure will be tested in the near future with the Ministries’ officials appointed in the Sub Working Groups and the Working Groups.

The Procedural Manual covers:

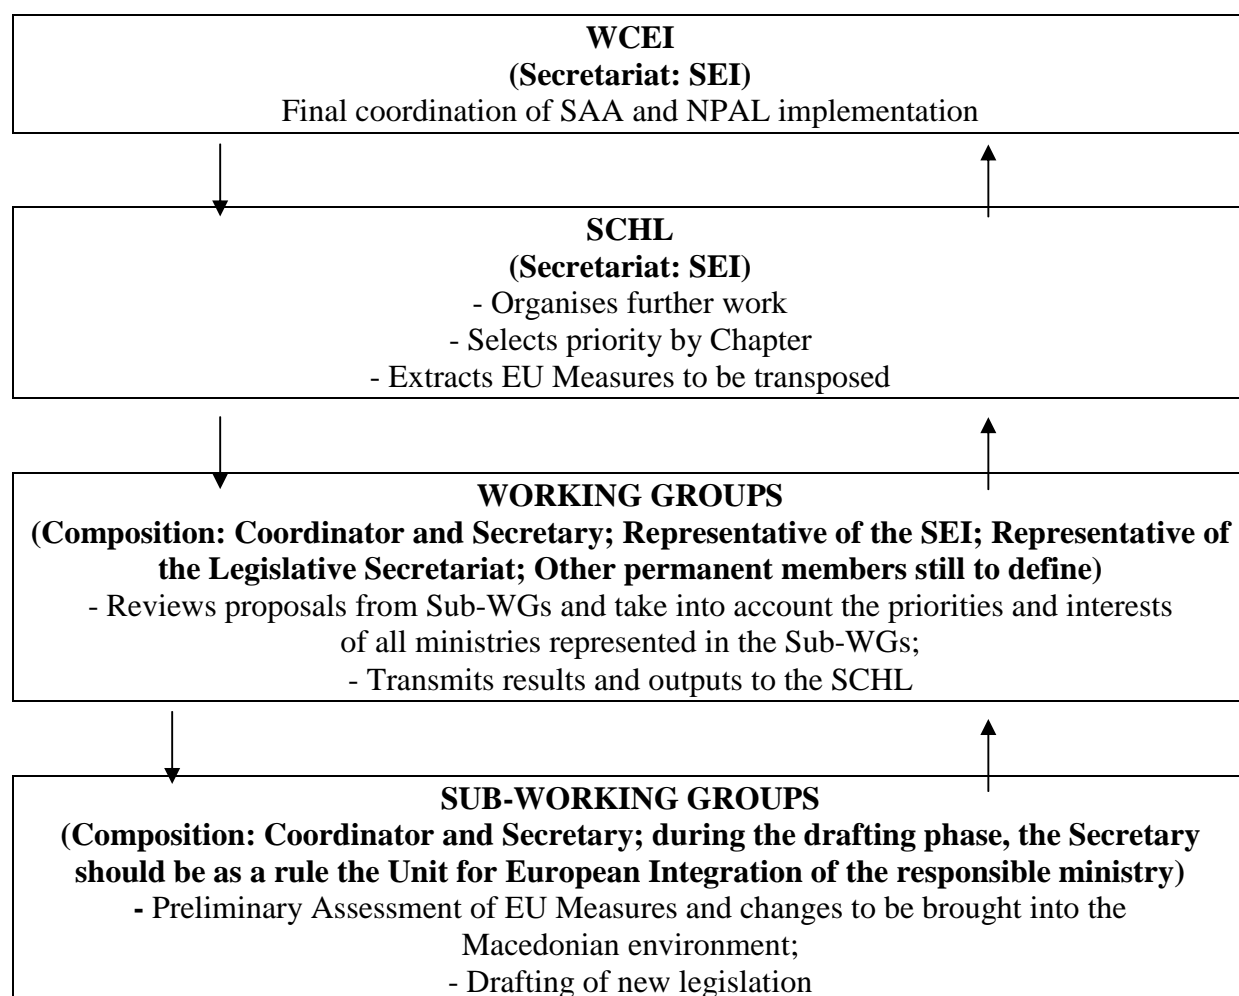

- Organisation and tasks of Working Groups and Sub-Working Groups;
- Role of the Ministries, including their European Integration Units;
- Reporting duties to the Working Committee on European Integration and the Sector for European Integration.

SEI-UAL is currently creating Database Model that will be used for monitoring of the approximation process. In the near future, transmission of reports and documents to the SEI-UAL should be in electronic form (on a floppy disk or by email), in addition to the standard – written form (by fax or post). This requirement is fully necessary since the SEI/UAL will integrate the reports received in a new aggregated database comprising successive layers of information provided.

Note:

Any law proposal, as soon as it is realised that it has there are EU implications, should be prepared according to the procedure presented in this Manual. (See Article 66 (3) of the Government Book of Rules: ‘any law proposal or legal act as specified in above paragraph 2 shall contain an analysis (overview) of their compliance with EU legislation’.)

Hierarchical structure is same in both phases.

THE ABOVE SCHEME AIMS TO PRESENT THE CO-ORDINATION AND ONITORING OF THE APPROXIMATION PROCESS

PREPARATORY WORK BY SEI/UAL

The SEI/UAL prepares and distributes **Initial Dossiers** related to the approximation process to individual members of the relevant ministries responsible for the co-ordination of the work of the Sub-WGs.

This Dossier contains:

- List of the complete set of EU Measures to be transposed (including Macedonian translation when available);
- Name of the responsible co-ordinating ministry/agency;
- List of the members of working groups and sub-working groups
- Translation of the White Paper chapters relevant for the WG;
- List of Macedonian legislation enacted (amended and appended) in the period of 1992-2000 (including 2000);

In the future, it is proposed to include in the Dossier:

- References to the provisions of the NPAL, IA and SAA and deadlines for transposition in line with IA/SAA requirements (one year, first transitional period, etc.)
- A short description of the members of the Sub-WG with their official address, actual position, and qualifications (including foreign languages and technical experience);

After the distribution of the Dossier, the work of the Sub Working Groups can start.

According to Article 29 of the Rules of Procedure for work of the Working Committee for European Integration, the Sub-Working groups have to choose on the first meeting a Coordinator and define the content and dynamic of the activities to be performed. First meeting of the Sub-Working group is initiated by the EIU in the responsible Ministry and the proposal for appointing co-ordinators of the Sub-WGs is given by the responsible Ministry or other competent body.

PHASE ONE: PRELIMINARY ASSESSMENT BY THE CO-ORDINATOR OF A SUB-WORKING GROUP AND ITS MEMBERS

The Preliminary Assessment is a general ‘kick off (launching) procedure’ to be carried out at the level of the Sub-WGs.

The Preliminary Assessment will comprise:

1. Priority review of the EU measures to be transposed (as defined by the NPAL and SAA/IA);
2. Identification of the equivalent set of Macedonian laws affected by the transposition process with a list of ministries/agencies involved (see Template 1 for item 1 and 2);
3. Needs for Changes, with indications of expected complexity of the process, i.e. a description of topics requiring detailed analysis (see below PHASE 2), and/or
4. New law(s) to be drafted;
5. Preliminary evaluation of internal human resources (WG members and ministerial staff in person days) needed for the drafting process and related activities, including coordination, secretariat, etc.;
6. Preliminary evaluation of external resources needed and related costs to prepare the drafts (number of working days for external expertise, translation...);
7. Proposed time schedule for transposition (e.g. in year one: EU Measure a, b, c; in year 2: EU Measure d, e, f, etc.).

INTERNAL WORK OF THE WGs AND SUB-WGs

Duties of the Coordinator of the Working Groups and sub-Working Groups are regulated by Article 29 of the Rules of Procedure for work of the Working Committee for European Integration .

According to Article 30 of the Rules of Procedure, Coordinators of the Working Groups, as well as Coordinators of the Sub-Working Groups will submit all needed materials to the members of the working groups and sub-working groups and suggest the agenda of the meetings.

The duties of the Coordinator of the Working Groups are to define the content of the work, the dynamic and the tasks to be performed in the appropriate domain covered by the Working Groups.

Working groups:

- Collect the reports from the Sub-WGs and submit them to – through SEI – SCHL;
- Check if the reports are submitted regularly;
- Provide suggestions to amend or append the reports.

The Coordinator of the Sub-WG should split and distribute the work among its members. Members should prepare the above assessment on their own and report to the Coordinator. Co-ordinating meetings of the Sub- WG might be necessary to discuss results.

REGULAR REPORTING

The Coordinator of the Sub-WG will report regularly – monthly - on progress achieved to the Coordinator of the WG, who him/herself will report in a compiled form

regularly - bi-monthly - through the EIU of the respective Ministry - to the SEI/UAL and the SCHL (see Template 1 - Progress Report Phase 1). The Co-ordinator of the WG compiles the Sub-WGs reports into synthetic report on the activities performed by the Sub-WGs within its WG. The synthetic report is submitted to – through EIU in the responsible Ministry – SEI/UAL and SCHL.

FINAL REPORT

The above assessment shall result in a Final report (see Template 2) of each Sub Working Group.

All reports of the Sub Working Groups including the final one will be submitted to the Coordinator of the Working Group, and then provided for review and acceptance by the SCHL via the SEI.

The final report will have to be annually reviewed based on the overall progress achieved.

MINISTRIES' DRAFTING DECISION

Based on the Final report, the responsible Minister will issue a decision for start of the drafting process. Copies of this decision are delivered to Working Group and the SEI (see Template 3, with an example of completed form).

This order will include:

- Title of the measure to be drafted;
- Assignment of Co-ordinator of the Sub-WG;
- Assignment of the human resources that shall draft the measure(s);
- Budget required for translation and/or external expertise (if necessary)
- Provision of conditions for entering into force.

Based on this decision, the Coordinator of the Sub Working Group will launch and organise the work of the Sub Working).

The team should be set up according to the detected needs. It will most possibly comprise lawyers, engineers, technical experts and specialists of the covered area, an advising member of the Legislative Secretariat and Ministry of Finance, as well as experts of the sectors/agencies affected.

VII. Please attach relevant documents to the report.

Working Group 1-27:
Area....

PHASE I – FINAL REPORT (sample)
for Transposition Planning

Created by: ...Sub-WG..# /'Main Topic'...

1)	2)	3)	4)	5)	6)		
Time/Priority	Legal Acts involved		Article of	Person(s) suggested	Person Days expected		Translation
or Deadline	National Measure: and appended, or New measure(s)	-Amended EU Measures to be transposed	SAA / IA		Internal Res.	External Res.	Pages
a) 30.06.2002	National Law – amending				215	45	370
b) 2002		EU Directive 1			25	10	150
2002		EU Directive 2			120	30	0
2004		EU Decision 3			70	5	220
30.06.2003	National Law – amending				160	55	330
2003		EU Dir I			75	5	0
2002		EU Dir II			35	10	210
2004		EU Regul. III			50	40	120
30.12.2003	New Law				140	15	375
		EU Directive 1			20	0	75
		EU Directive 2			90	10	250
		EU Decision 5			30	5	50

Explanations: (2) Based on the fact that drafting teams will work on **Macedonian** legislation, this is the **leading** sorting criteria for the Process in general.

The **Timing (1)** is to be understood:

a) Planned **Deadline** in the Ministry for a Draft Law Proposal - t.b. handed over to the government procedure for enactment of laws

b) the original **Deadline** per EU-Measure as set out in the NPAL dated 6/2001

Note: This actually indicates that Deadline (for draft law) in **a)** should expire **BEFORE b)** end of the year(s) indicated by NPAL,

otherwise the external milestones - including enactment procedure - cannot be met!

(3) Articles of SAA/IA directly linked to the relevant EU Measures should be indicated

(4) Persons should give a first indication, which national Expert(s) might be the most adequate for the future (drafting) stages

(5) Menpower should be **indicative** to provide estimation for the staffing and costs to be expected - details for complex items will be assessed in Phase II

(6) Translation requirements should be as **PRECISE** as possible in order to allow for a consolidated planning at SEI/CTU level as well as for costs expected

Technical: This layout is provided in **MS-Excel** as data recording and calculations will be much easier for future / integrated use in IT systems and more stable in handling

New Group of Law can easily be inserted/added by copying the cells forward incl. contained formula/calculations and formatting parameters

Template no. 3
MINISTER'S DRAFTING DECISION

According to Article 57 of the Law on organisation and work of the administrative bodies (Official Gazette of RoM no.58/2000) the Minister of _____ has adopted

**DECISION FOR LAUNCHING THE PROCEDURE FOR DRAFTING THE LAW ON title
of the law**

1. The following **EU measures** from the NPAL area _____ (# and title) should be **transposed** in the indicated period:

<i>Deadline set in the NPAL (year)</i>	<i>Title, number and date of adoption of the EU legal act</i>	<i>Deadline for results from the drafting procedure</i>	<i>Comments</i>

2. The following person is appointed as responsible **Co-ordinator** of the Sub-working group:

<i>Institution</i>	<i>Name</i>	<i>Actual position</i>

3. The list of suggested members out of the Sub-working group for _____ selected for this task are the following:

<i>Institution</i>	<i>Name</i>	<i>Actual position</i>

4. For translation and participation of external experts in the procedure for drafting the Law on _____, the following amount is approved: _____ denars.

5. This decision enters into force on date of signing.

Date: _____

Signed by Minister _____

**MINISTER'S DRAFTING DECISION
EXAMPLE**

According to Article 57 of the Law on organisation and work of the administrative bodies (Official Gazette of RoM no.58/2000) the Minister of Agriculture, Forestry and Water Economy has adopted

**DECISION FOR LAUNCHING THE PROCEDURE FOR DRAFTING THE LAW ON
MEDICINES FOR VETERINARY USE**

1. The following EU measures from the NPAL area no.1. Free movement and safety of industrial products should be transposed in the indicated period:

<i>Deadline set in the NPAL (year)</i>	<i>Title, number and date of adoption of the EU legal act</i>	<i>Deadline for results from the drafting procedure</i>	<i>Comments</i>
2004	Directive 81/851/EEC of 28/09/81 on pharmaceuticals for veterinary use	May 2004	
2004	Directive 81/852/EEC of 28/09/81 on pharmaceuticals for veterinary use	May 2004	

2. The following person is appointed as responsible coordinator of the Sub-working group for Chemical products (no. 1.3. in the NPAL):

<i>Institution</i>	<i>Name</i>	<i>Actual position</i>
Ministry of AFWE	Nadica Nadevska	Head of the International Co-operation and investments

3. The list of suggested members out of the Sub-working group for Chemical products (no. 1.3. in the NPAL) selected for this task are the following:

<i>Institution</i>	<i>Name</i>	<i>Actual position</i>
Ministry of AFWE	Vera Verovska	Deputy head of the Department for chemical products
Ministry of AFWE	Danka Dancevska	Head of the Legal Department
MoE	Marija Marevska	Deputy head of the Sector for market control
Faculty of Agriculture	Mile Milevski	Professor on subject Foodstuffs

4. For translation and participation of external experts in the procedure for drafting the Law on Medicines for Veterinary use, the following amount is approved: 45.000,00 denars.

5. This decision enters into force on date of its adoption.

Date: 10.12.2003

Signed by Minister_____

PHASE TWO: DRAFTING PHASE

I – Detailed Analysis

In accordance to the decision adopted by the Minister, the drafting process starts.

Depending on the complexity of the EU Measures to be transposed, there will be a further Detailed Analysis before the drafting as such. For less complex topics, work can proceed directly to drafting.

This Detailed Analysis will comprise:

A. Conceptual Analysis

1. Detailed preparation (see instructions in Annex 2);
- 2.
3. Detailed review (down to paragraphs) of Macedonian legislation affected (* Requests for advice to be addressed the Legislative Secretariat when necessary).
- 4.
5. Menu of Options – 1st provided by the EU Measure and 2nd feasible for successful implementation in the existing infrastructure of national measures;
- 6.
7. Impact assessment for each option
8. Impact assessment should comprise:
 - Cost/Benefit Analysis;
 - According to procedures set by the Ministry of Finance for Fiscal Impact Assessment (see Annex 4: “Guidance for Completing Fiscal Impact Assessment for Proposals submitted to Government” – Sept. 2001);
 - Description of institution-building aspects (see Annex 3: “Impact Assessment of Laws”).
1. Preparation of vital parameters for the Table of Compliance (ToC);
2. Primary and secondary legislation needed (* Requests for advice to be addressed the Legislative Secretariat when necessary)
3. Details of external resources required.

Supporting documentation for this analysis can be found in Annex 1 and 2:

‘Outline of the Strategy to Implement the Acquis in SAA Countries’

‘Guidelines for the Quality of Approximation’.

B. Findings and Conclusions based on the completion of Detailed Analysis

A deadline for the submission of the final draft law proposal should be agreed on at this stage.

II – Drafting Process and Compilation of Draft Law Proposal

Sub-Working Groups will finalise the draft laws and by-laws according to their obligations, as well as the tables of correspondence of the legal acts with the EU legislation, and to transmit them for review and further procedure to their Working Group (see Article 32 of the Rules of

Procedure of the WCEI), and through the EIU in the responsible institution to SEI-UAL and SCHL. Co-ordinators of the Working Groups will submit the legal acts and corresponding tables of compliance to the Sub-Committee.

Article 66, paragraph 2 of the Government's Rules of Procedure regulates formal aspects in the presentation of draft laws. According to this article, draft laws and other acts or regulations to be passed or enacted by the Government must be submitted "in the form in which they have to be adopted".

The Draft Law Proposal to be submitted to the Government for adoption shall contain:

- The reasons for enactment of the regulation;
- The basic principles for the establishment of the fundamental relations that are being regulated by law;
- The manner in which their establishment is proposed;
- An "explanation" containing and defining the constitutional and legal grounds for its enactment;
- The funds necessary for its implementation and the sources that will provide them;
- Other circumstances relevant for the issues that will be regulated.

According to Article 66 paragraph 4 and 5, law proposals and other acts must contain drafts for the secondary legislation that arises from the law to be adopted.

In accordance to the Article 66, paragraph 3, of the Government's Rules of Procedure: "A Draft law proposal and other legal acts and measures stated in Paragraph 2 of this Article must contain analysis (overview, outline) for their compliance with the EU legislation", the obligation should be realised through preparation of a Dossier containing:

- Explanation and justification of the draft law proposal;
- Overall comments on implementation;
- Draft Skeleton of needed secondary legislation;
- List of EU measures that are supposed to be transposed with statement on the transposition level and further need of transposition deadlines;
- Table of Correspondence (ToC) in line with the layout provided by the Legislative Secretariat;
- Full Regulatory Impact Assessment (**RIA**), i. e. institutional, financial and social implications, cost/benefit analysis, fiscal implementation... (see Annex 2,3, and 4).

REPORTING

During the drafting process the Coordinator of the Sub-WG (p.s.: if a Sub-WG has more than 5 active projects, the detailed reporting will be no more feasible by its Coordinator) shall provide monthly progress reports to the Coordinator of the WG containing information on progress made, problems met and implications on the timetable (see Progress Report Phase 2).

TABLES OF CORRESPONDENCE

1- Why: The Tables of Correspondence (TOC) help:

- (a) **verify** whether the existing legislation or a Proposal is Conform with EU requirements (Mak-EU)
- (b) **systematise** the transposition of EU law in the national legislation (EU-Mak)
- (c) **prove** to the European Union that the national legislation does correspond to the EU legislation.

2- Who: The TOC are to be used by:

- (a) **the line ministries** when transposing EU legislation, assessing existing legislation and drafting new legislation to be approximated
- (b) **the Legislative Secretariat** and screening institutions when verifying the compatibility of Proposals to the EU legislation;
- (c) **the Parliament** and any **entity, public or private** (Stakeholders, Associations, NGO) for debate and/or the follow-up of the progress of the actual implementation process
- (d) **the national Negotiators** dealing with the EU institutions in the context of the accession policy.

3- What:

The TOC are made in two forms:

- (a) **Form EU-Mak** where provisions in a specific European legislation (directive, decision, regulation) are listed and a reference to the corresponding national legal acts is to be given and;
- (b) **Form Mak-EU** where provisions in a specific national Proposal are listed and a reference to the corresponding European legislation (directive, decision, regulation) is to be given. Many TOC have been prepared on the basis of the European legislation defined in the 1995 White Paper on the preparation of the CEEC countries for entering the Internal Market. The tables can not be regarded as covering all provision of the legislation or representing a legal instrument. Amendments since then should be included using the Information Resources.

Table of Correspondence EU-Mak

On the cover page the national laws and other national measures that have been used to transpose the EU legislation are referenced as well as information regarding the dates of submission and development of the table and (optional) the name of the responsible for the transposition. The tables include the following columns:

a- Article

The number of the article in the EU legislation to be implemented or other identification of the provision to be implemented such as annexes, definitions or general provisions.

b- Description

The provision of the article or identified provision in the EU legislation to be implemented is stated sometimes in a short version. The provision stated is often the major requirement in the article, annexes in general or general provisions. It is therefore necessary to compare the original EU legislation to the table when filling the table out. In most cases however the articles in the EU legislation in question have been stated as a whole. Should there be provisions in the directive that have not been listed in the table, these shall be added at the end. It is the responsibility of the Drafter to compare the table to the original text of the legislation in question to secure that all provisions have been included.

c- Measures/provisions

The Drafter shall list the laws, regulations and other measures used to implement the EU legislation into the national legislative system. This shall be done by referring to the acts named on the cover page and the numbers of the relevant articles in the laws. The EU legislation can be transposed through different laws and/or regulation and even through other means (see Guidelines).

d- Remarks and Grading

TOC are constructed in two **standard formats** with an **Approximation Grading**:

- 5- Conform & effective
- 4- Compatible & effective
- 3- Partially Compatible, Conform or effective
- 2- Non-compatible, non-conform, ineffective
- 1- In breach of EU requirement(s)

Should there be the need for further information regarding the transposition this information shall be given under this heading, or when necessary in a specific document, which is referred in the column. This can be information needed to explain the transposition method further or an explanation on way the provision has not been implemented. The information can also be used to explain different time tables for the implementation of the provision of the legislation.

**TABLE OF COMPLIANCE
FORM A: EU-MAK**

Area (topic): _____
and Title of EU measure:

EU Article	Description	National Measure/Provision	Grading - Remarks

ANNEXES

Annex 1: OUTLINE OF A STRATEGY TO IMPLEMENT THE COMMUNITY ACQUIS IN SAA COUNTRIES

1. Data

1.1. Starting point: Interim agreement into force

1.2. Assumptions: SAA ratified by MS

1.3. Deadline to approximate:

- Normal duration 10 years (in 2 stages of 5 years)
- Priorities: Public Procurements, Intellectual Property, Standards and Certification, Competition, Data protection

1.4. Purposes:

- To comply with the existing obligations
- To limit the duplication of work (multiple revisions on the same text)
- To prevent the overloading of the Parliament's agenda

Two situations: full implementation of EU law or step-by-step alignment

2. Strategies

2.1. Full implementation of EU law

2.1.1. Areas of relevance: chemicals products, foodstuffs, Directives New Approach, consumer law, labour law, equal opportunities, protection of personal data, ...

2.1.2. Reservations: provisions to be inserted at the relevant moment

Follow-up:

- New texts adopted at the EU level: updating in technical matters (comitology), amendments, new texts in related matters
- Implementation of the IA/SAA as completed or interpreted by decision of the Cooperation/SAA Council or new Protocols (for example in the field of transports as it is already foreseen)
- Provisions of a new national law in related matters which could induce adjustments and/or consolidation

Moment of accession:

- Relations with other MS and the Commission (for example, exchange of information as required in many Directives/Regulations)
- Use of European forms: reports, notifications, Customs documents,...
- Designation of the national members in the European Committees (State representatives in Standing committees or Regulatory committees, others nationals in Consultative committees or Scientific committees...)
- As a result of the negotiation with the EU (provisions which could appear in the future Accession Treaty)

2.2. Step-by-step implementation of EU law

2.2.1. Areas of relevance: each time EU laws lay down provisions related to:

- Customs Union

- Removal of internal frontiers (directly or indirectly)
- CAP and Common Market Organisations
- Other common policies (competition, transports, as far as the Commission is managing the matter)

2.2.2. Measures to be taken: visibility so that to identify precisely

- Purely national provisions
 - transitional
 - by nature (out of the scope of the Community law)
- EU law to be implemented immediately with the desired degree of approximation (exceptions, adaptations or even implementation of some provisions of the last EU law in the matter, where possible)
- EU law to be implemented later
- International agreements at stake, in force or to be concluded later
 - multilateral (eg. WTO agreements)
 - bilateral (eg. agreements with former Yugoslavia Countries)

3. Conclusion:

The draft law submitted to the Legislative Secretariat and the Parliament should implement the EU Legislation

- Mostly, during a first phase, with regard to the objectives of that Legislation more than the detailed provisions
- To the fullest extent
- In accordance with the limits decided by the Government as they are dictated by
 - The institutional development
 - The power to negotiate later another transitional period and/or duly justified exceptions
- Having in view, as often as possible, the last state of the EU law

Within the legal framework in force at the date of the presumed adoption (including decisions taken by the Cooperation/SAA Council and new Protocols to be negotiated and added to the IA/SAA)

Annex 2: GUIDELINES FOR THE APPROXIMATION

To confirm that Proposals of legislation or regulation are Conform, Lawful, and Effective, you shall:

I- Conform

1. Delineate the **scope of application** of the National and EU legislation in issue
 - 1.1. Determine whether and how the **IA** and the **SAA** regulate the matter in question
 - 1.2. Identify the **legal basis** and **principles** in EU/EC Treaties, EU cases, communications on the issue.
 - 1.3. Determine the **inter-relationships** between the texts : framework / daughter, horizontal/sectoral
2. Check compliance with other **international** commitments
3. Assess general and specific **compliance** of the Proposal with the EU text and use the TOC
4. **Compare** with model or relevant transpositions in other States
5. Evaluate the **best degree** of approximation
 - 5.1. Use firstly the Directive itself (Direct effect) to identify instances of over or under implementation
 - 5.2. Where there is doubt about the precise legal obligation, Ministers should be presented with options in the *PIA*
6. Clearly report at the end of the TOC **exceptions-exemptions-derogations-sequencing**

II- Lawful

7. Confirm the suitable type of Proposal, and the best **apportioning** of the measures (*PACT* rule)
8. **Anticipate** the life of the text according to
 - 8.1. the evolving legal framework
 - 8.2. entering into force, implementation and transitional dates
9. Ensure **consistency** and correct insertion in the body of laws:
 - 9.1. Check the proper references, including to the EU legislation to be clearly indicated
 - 9.2. References to other acts should be kept to a minimum.
 - 9.3. Ensure proper withdrawal (abrogation) of old texts
10. Check the **structure** of the Proposal
11. Check the **wording** of the Proposal, including coherent translation and uniform interpretability

III- Effective

12. **Evaluate** the extent to which the result requested by the EU law is likely to be achieved
 - 12.1. Ensure that the text can have a straightforward impact and that it can be adequately implemented
 - 12.2. Evaluate the Proposals Impact Assessments carried out by the Ministry (annex).
 - 12.3. Identify and report regulatory gaps due to timing (IA), institution(s), formalities, supervision, control or others through which the measures will take effect
13. Assess the **incentives** through which the measures will take effect:
 - 13.1. In selecting a particular type of measure, every effort shall be made to minimise the costs to individuals, companies, institutions and Gvt (if such imposition is not the objective of the measures).
 - 13.2. the disadvantages of a measure is not be disproportionate to the objectives
14. Assess the **enforceability** of sanctions:
 - 14.1. enforcement by means of administrative, civil or criminal law or by other means shall be looked into and their available appeal.
 - 14.2. revisit the sanctions for existing domestic law to ensure a fair and effective system before creating a new criminal offence
15. Had all interested parties the opportunity to agree/present their views in consultations?
16. Is the Proposal **readable**?
17. Will the text be **accessible** to users, should guidance be recommended?

Annex 3: IMPACT ASSESSMENT OF LAWS

Introductory note

The countries in central and Eastern Europe, including here the Republic of Macedonia have been and still are undergoing a significant overhaul of their existing structures, systems and legal framework. All these countries are connected with their strategic interest, accession to the European Union and NATO. If we know that the EU is enlarging (that is an irreversible process), and is enlarging with the countries that are approximated to its standards, it is clear that the countries that would like to taste the benefits of the internal market, customs union, Shengen zone and democratic development, would have to undergo to the necessary changes. So, when we speak of any policy instrument, or reform that should be undertaken by the countries, we speak of policy instrument, or reform that should be undertook by the Republic of Macedonia.

In developing their policy capacity, Republic of Macedonia is facing the challenge that improvements are still needed in all phases of policy cycle: defining policy objectives; development of policy options; elaboration of the policy instrument; implementation, and evaluation. Impact assessment is an important tool for improving policy capacity, and thereby the quality of political decision-making of policy instruments.

There are three phases in the policy cycle where impact assessment is particularly useful:

- In the policy development phase. Once the political decision has been taken to pursue certain objectives and goals, impact assessment is used to select the most appropriate policy instrument.
- In the instrument development phase. Once the instrument has been chosen, impact assessment is used while drafting the instrument, to ensure that it is well designed and will meet the given objectives in an efficient and cost-effective manner.
- In the evaluation phase. Once the instrument has been implemented for a certain time, impact assessment is used to verify the real impact; assess to which extent the objective has been met, and initiate amendments/corrections, if necessary.

There are basically three families of policy instruments: regulatory (rules, prohibitions, licenses, etc.), financial (subsidies, taxes, tax deductions, user fees), and informational (advertising campaigns, information booklets, internet), all of the above policy instruments, require legal base in order to be implemented. In other words, in order to implement a policy, a respective law or a regulation has to exist or to be passed. For this reason, Republic of Macedonia should focus on impact assessment in the context of the development of legal instruments especially within the realization of its Programme for approximation of the national legislation with the EU legislation. However, in those cases where a policy objective is pursued without a legal instrument but only with budget allocations, the policy instrument can and should be assessed in the same way as a legal instrument.

Why impact assessment

Impact assessment is a tool to improve the process and the information base throughout the policy cycle, which in turn allows for better-informed decision-making on the political level. Since impact assessment provides information about the possible consequences of new policy instruments, such as laws or investment programmes, in the case of the Republic of Macedonia the Programme for approximation of the national legislation with the EU legislation, or real consequences of existing instruments, it contributes to reforming and modernising the state. The objective is not only to improve the policy instruments, but also to reduce the number of legal instruments. Good impact assessment should help to introduce fewer, clearer and more acceptable pieces of legislation.

Carrying out of impact assessment is only useful if it has a real impact on decisions to be taken. Impact assessment does not, of course, replace political decisions, nor the political responsibility of the Minister or the Government. Ideally, the results of impact assessment should be seriously considered when taking political decisions. There are other important factors influencing political decisions, and in some cases they may be more important to government than the results of analysis and assessment. Nevertheless, it remains the responsibility of the civil servants to carry out good assessment, and to present the results to the Ministers in the most objective way possible, while recognising that the final decision rests with Ministers.

What is impact assessment

Impact assessment is an information-based analytical approach to assess probable costs, consequences, and side effects of planned policy instruments. It can also be used to evaluate the real costs and consequences of policy instruments such as laws, regulations, and public investments. Some form of impact assessment should be applied whenever the intended instrument is expected to give rise to significant changes and/or costs, e.g., new tax laws, labour code, social security laws, or subsidies regulation.

Impact assessment offers:

- Comparative information on foreseeable consequences of the different policy alternatives;
- During the drafting of the instrument, information on issues, such as compliance, implementability, specific burdens and/or advantages for groups of addressees;
- For an existing law or investment programme, information on the degree to which an existing instrument has met the intended objectives.

Impact assessment can and – if possible – should be applied several times during the policy cycle in order to improve on a long-term basis the quality of policy instruments, i.e. laws, regulations, and investment programmes. Depending on the point in the policy cycle when impact assessment is undertaken, i.e. as a forecasting or evaluation instrument, the importance of certain techniques used for the assessment may vary.

How to do impact assessment

The time and resources to be put in impact assessment should depend on the importance of the policy instrument. The more important the policy instrument is, and the more impact it can be expected to have, the more sophisticated the impact assessment should become. A thorough impact assessment, which should be carried out for important new policies/ policy instruments/ legislation is neither easy nor rapidly carried out. It calls for professional expertise, time and resources. A certain level of impact assessment can be carried out by civil servants without in-depth training in quantitative and qualitative assessment techniques. Testing the legal instruments by applying it analytically to a few real cases may already bring to light certain flaws. Also an inter-ministerial meeting to discuss and clarify possible cost factors, where these costs may arise, and which possible unwanted side effects may occur, can produce some valuable information.

Impact assessment is often equated with cost-benefit and cost-effectiveness analysis. Certainly, these analyses form an important, in not the most important component of impact assessments.

The three types of impact assessment

Impact assessment of the draft instrument

When drafting a legal instrument, impact is used to optimise the efficiency and effectiveness of the instrument in order to ensure that to the extent possible it will achieve the intended objectives at minimum cost and with the least number of unintended negative consequences. The assessment is

carried out by testing the draft against a set of pre-defined assessment criteria such as practicability, costs, implementability, clarity, and expected compliance.

The expected results of impact assessment at this stage will be information on:

- Budgetary, social, economic, environmental costs and benefits;
- possible problems with enforcement, acceptance and compliance;
- distribution of the costs and benefits within the population and sub-groups;
- possible flaws, contradictions, lack of clarity, and gaps in the draft; and
- unwanted side effects.

Carrying out an impact assessment of a draft instrument provides the possibility to introduce necessary changes that can reduce costs, improve benefit, and minimise unwanted and unexpected consequences of the instrument.

To yield these results, an impact assessment should be divided into three distinct steps:

- preparation;
- analysis;
- assessment of the results of the analysis.

Only thorough preparation will enable the lead administration to carry out an efficient analysis and – when assessing the results of the analysis – produce feasible recommendations for change. In order to clarify the work that will need to be carried out during the three steps of an impact assessment an indication is given below:

Preparation

Preparation of the assessment has to start with the determination of the specific objectives and expected results of the assessment. Expected results could be information on cost, implementability or enforcement possibilities. The expected results then have to be broken down and defined as detailed assessment criteria. After the decision on criteria and scope of the assessment has been taken, the methods and techniques to be applied in the assessment have to be determined. Typical methods and techniques to carry out an assessment of a draft instrument are:

- cost-benefit analysis;
- cost-efficiency analysis;
- simulation;
- test of the instrument by applying it to real cases on a pilot basis.

Finally, to apply the selected methods and techniques to the instrument, further preparation is necessary.

Analysis

Only after thorough preparation, should the different methods and techniques be applied, as only then can they yield the best possible results. If it has been decided to carry out an in-depth impact assessment, it is usually necessary to involve outside expertise in the analysis of the instrument. Pilot tests and simulation should – if at all possible – always involve the addressees of the instrument, i.e. civil servants who may benefit from or be constrained by the new instrument. The addressees of a draft instrument are usually sensitive to possible problems with the draft, in particular regarding implementability and costs. The information they might provide is therefore invaluable for the quality of the assessment.

Assessment of the Results of the Analysis

The outputs of this phase are a report on the assessment and recommendations. The recommendation of the impact assessment of the draft instrument might be: to keep the draft as

proposed, to introduce specific changes or amendments to the draft before submitting it to the Minister, to cancel the draft, or to pursue a completely new approach. The draft instrument has to be submitted together with the report of the impact assessment and the recommendations. If recommendations have not been introduced into the draft, this has to be indicated and reasons have to be given. After the approval of the Minister, who may initiate additional changes, the draft, including the report and the recommendations, is ready to be submitted to the Government for decision.

Assessment criteria

The issues, which should always be included in the criteria against which the draft instrument is assessed, are listed and briefly explained below. These criteria are of particular importance when drafting a legal instrument; for this reason they are listed in this section.

Meeting the objective

This criterion is geared to assess whether or not the draft instrument meets the set objectives to the best possible degree. For the analysis it is necessary to explore the following questions:

- Could there be counterproductive side effects?
- Is it possible/easy to avoid compliance?
- Is misuse of the instrument possible?
- Are short-term costs justified by the long-term benefit?
- Is the distribution of benefits and costs justifiable and in line with the given objective?
- Is there a significant discrepancy between the segment of the population that pays the price, and the segment that gets the benefits.

Practicability

This criterion aims to assess one aspect of the implementability of the draft instrument, namely the applicability of the instrument in the existing administrative structure. For the analysis it is necessary to explore inter alia the following questions:

- Are discretionary provisions formulated in away that decisions cannot become arbitrary?
- Are administrative requirements limited to the degree necessary?
- Is it probable that the cost for administering the instrument outweighs the benefit?

Clarity

This criterion is geared to assess another aspect of implementability, namely the clarity of the legal text and possible difficulties to understand the instrument correctly and to comply with it in an appropriate way. The following questions should be respected:

- Is the language of the provision clear and understandable?
- Are there any contradictions in the law?
- Are all definitions defined unambiguously?
- Are the tasks to be carried out by the addressees clearly listed?

Implementation costs

This criterion is geared to assess those costs that are avoidable. The following questions should be respected:

- Are the incurred costs proportional to the intended objectives of the instrument?
- Is the administrative work proportional to the expected benefits?
- Are the envisaged procedures as clear and simple as possible or could they slow down decisions in an inadequate way, etc.?

Interdependencies

This criterion is geared to assess whether or not the new instrument creates conflictual interdependencies with other legislation, which may lead to unwanted side effects, i.e. non-targeted addressees are benefiting or suffering from the new instrument. For the analysis it is necessary to explore the following questions?

- Is there existing legislation that covers the same or complementary target groups?
- Could there be an overlapping of the regulated subject?
- Could provisions in existing legislation hinder or be in opposition to the intended objectives of the new instrument?

Impact assessment aimed at choosing a policy instrument

Impact assessment for the choice of a policy instrument is used to explore the necessity of a legal intervention, to identify alternative policy options and their probable impact, to compare the options with regard to impact and feasibility and to determine the best possible policy option. The expected result of this impact assessment is a report that:

- describes and assesses the foreseeable consequences of the different policy options;
- identifies the probable setbacks and advantages of each option and justifies why one policy will most likely be the best option to reach the intended objectives.

In addition, the report will sketch out the intended draft legal instruments. The three steps for this type of impact assessment are:

Preparation

Different policy options have to be developed and the criteria, which the policy option should meet, have to be determined (e.g. cost neutrality, advantages for a specific target group). As a point of principle, the “zero option”¹ always has to be considered and explored seriously. The reason for this could be that either government intervention would not solve the problem or that proper enforcement of the already existing instruments could solve the problem. In order to achieve more or less reliable results, it is advisable to consider possible future developments in the policy area and to assess the policy options by taking into account these future developments, i.e. by applying the options to different scenarios. While preparing the policy options a first consultation should take place. Consultations should be carried out with all the other concerned ministries, with local authorities, with respective NGO’s, and with independent experts. This consultation round serves to gather as much information as possible on the area in which the government wants to intervene, and to enable civil servants to develop sound policy options.

Analysis of the possible impact of the different policy options

As a second step, the different policy options have to be analysed and compared with regard to substance, internal logic, and completeness. In addition, possible impacts of the policy options have to be analysed against quantitative and qualitative criteria. To obtain the best possible results, it is necessary to discuss the policy options with all ministries concerned, the administrative bodies and the local authorities, as they may have to implement the policy option under consideration.

Assessment of the policy options

¹ Zero option means that no Government intervention is needed.

As a last step the results of the consultations inside and outside the administration as well as the results of the analysis carried out by civil servants in the lead ministry are evaluated, documented and comparatively assessed. The output of this comparative assessment will be a recommendation for the political decision-takers determining the policy option, which seems to best meet the set requirements. The final decision on which alternative to pursue rests with the political level. There may well be political considerations, which could result in choosing other than the recommended alternative.

Impact assessment for evaluation of an existing legal instrument

An evaluation of existing laws or implemented investments is carried out to explore whether:

- the intended objectives were met;
- unwanted side effects occurred and to what degree;
- the instrument has proven to be easily implementable;
- a high degree of compliance has been reached; and
- benefits and set backs were distributed in a justifiable manner.

The expected result of an evaluation would be information on the possible need of amendments, changes or even abolishment of the legal instrument. As concerns investments, the expected result could be whether or not further investments of the same kind would be useful or if additional complementary investments are needed to optimise the return of the first investment. The three steps of an evaluation are:

Preparation

During the preparation of an evaluation it has to be decided whether the whole or only parts of the instrument are to be evaluated. In addition, the evaluation criteria have to be determined. Evaluation criteria could include the following: the degree to which objectives were met, cost development, cost-benefit effects, implementability and positive or negative side effects. Evaluation is carried out by comparing the expected and intended impacts with the real impacts.

Analysing the data regarding the real and the intended impact of the instrument

The analysis starts with the collection of data on the real impact of the instrument. This information is then compared with the impact intended when the instrument was originally prepared. The real data should, if at all possible, also be compared with data collected before the new instrument was enforced. The latter is necessary to obtain information on what kind of change, if at all, the new instrument actually brought about.

Evaluation of the Instrument

The collected information is evaluated in a comparative way. The evaluation criteria and the final evaluation of the instrument have to be documented. The recommendations, based on the evaluation have to be motivated in order to provide the political level with the necessary information to take a well-informed decision on future action regarding the legal instrument in question, namely amending, abolishing or keeping it as it is.

Improving the regulatory quality

For the purpose of improving the regulatory quality, the Council of the OECD passed a Recommendation that is phrased as 10 questions that policy-makers should ask about any regulation they are about to pass (and to existing one as well). These are:

- Is the problem correctly defined?
- Is Government action justified?
- Is regulation the best form of Government action?

- Is there a legal basis for regulation?
- What is the appropriate level of Government for this action?
- Do the benefits of regulation justify the costs?
- Is the distribution of effects across society transparent?
- Is the regulation clear, consistent, comprehensible and accessible to users?
- Have all interested parties had the opportunity to present their views?
- How will all compliance be achieved?

ASSESSMENT OF THE BUDGETARY AND ECONOMIC IMPACT

Estimating the net cost of a policy proposal is a particularly significant aspect of impact assessment. However, experience has shown that the most important contributor to the quality of policy decisions is not the precision of the calculations but the action of analysing the proposal from the initial stage. It is a mistake to assume that the impact assessment is away of producing the right numbers. The important thing is that the administration be able to identify both the likely and consequences of the proposed policy and alternative ways of implementing the policy.

Governments are under increased pressure to use public money more cost-effectively. Allocating resources from less efficient areas to more efficient alternatives is an important step in improving overall cost-effectiveness. At the very least, it also reduces the cost of Government action. To maximise cost-effectiveness, the concept of the cost to be considered should include not only direct costs but also a wider range of costs such as those associated with environmental and social impacts.

Costs can be broken into three basic groups:

- Direct costs to government, including all lower levels of Government - the costs of delivering a service of administering a regulatory system;
- Compliance costs for business and citizens affected - administrative and paperwork costs and capital costs;
- Indirect costs to the economy in general, such as environmental and social effects or reduced competition, innovation and investment.

However, total costs are dependent on a number of factors that need to be considered from the beginning.

CONSULTATION IN IMPACT ASSESSMENT

Consultation has always been an acknowledged means to create consensus, explore ideas, improve acceptance of new proposals, and increase transparency in decision-making. It is accepted that good governance, be it in the private or the public sector, is to a significant degree based on proper consultation mechanisms which are taken seriously by all parties. Despite this general acceptance of consultations, some public administrations and politicians, as well as private sector managers, often perceive consultations with interested parties as giving up power. Consultations are of crucial importance for impact assessments, since they can provide useful information, in particular when sufficient reliable data is not readily at hand and resources for specific research are scarce.

Why undertake consultation

The objective of impact assessment is to improve the analytical base of government decision-making and to this end to gather information on all possible consequences of intended government decisions, be it an investment measure, a new law, or possible amendments to existing law. The civil servants preparing government decision may be well informed, but under no

circumstances will they be in a position to have a complete overview of all possible consequences of a new regulation of investment, in particular if a regulation or an investment programme is of a complex nature. In addition, the civil servants preparing the regulation may not be in a position to thoroughly assess administrative problems that may surface when implementing new legislation in the field.

When to undertake consultation

Consultation should be a comprehensive part of all forms of impact assessment. As a general principle consultation should take place as early as possible in the process. It should always be done before a decision is taken, for the meaning of consultation is to improve the knowledge base for decision-making. Consultation should never be used as a justification of a draft instrument. Carrying out consultation without being willing to take the information into account and to consider it seriously is a waste of time and usually leads not only to a bad instrument but also to difficult relations with those consulted. If the impact assessment is geared to policy analysis, and should take place when the lead administration has developed and sketched out possible policy options. These options and their possible impacts are then the subject of the consultations. If impact assessment is geared to assess the possible impact of a draft instruments, consultations should be an on going process. If it has been decided to consult with NGO's or academia, the latest point in time for these consultations is before the draft goes to the Minister of the lead ministry for approval to submit it to the Government.

How to undertake consultation

All consultations have to be transparent in the way they are carried out. Therefore all consultations have to be well documented regarding those who were consulted, the issues on which consultation was carried out, and the results of the consultation. Those consulted need to receive written information. It should include - deepening on the purpose of the impact assessment - either the description of the policy options or the draft law of the project document, and, in addition, a definition of the main issues of the consultation and specific questions regarding these issues. These issues and questions should be grouped and targeted to the different groups/persons to be consulted.

During consultations inside the administration, it is understood that each ministry covers the issues within its own area of responsibility. For example, the Ministry of Finance is primarily responsible for assessing the budgetary impacts, the Ministry of Environment for environmental impacts and the Ministry of Economy for economic impacts, etc. Consultations outside the administration have to address specific questions. It should be ensured and carefully observed that the consultations include all groups that may have an interest in the new policy programme and that the results of the consultation are documented.

Consultation geared to evaluating an existing instrument is different from the two described above. Consulting with the administration and those groups of society targeted by the law means asking for real experience with the law and hard data, and possibly also for recommendations for amendments.

Consultation inside the administration may be done under a written procedure or take the form of inter-ministerial meetings. Consultations outside the administration may also be done under a written procedure or at a public hearing, some countries even practice to consult the public at large via the Internet.

Whom to consult

Consultation within the administration must always include the ministries who have horizontal responsibilities, primarily Ministry of Finance (budgetary costs), Ministry of Justice (constitutional and legal), Ministry of Interior (organization and implementation). For example,

Switzerland has a long tradition of direct democracy and of consulting the public at large. Several countries have introduced this form of consultation. A better solution may be to conduct broad public consultation only on major proposals where the impact on citizens is expected to be significant. One example is, of course, changes to the Constitution, but significant changes to the pension system or to education may also benefit from broad-based consultation.

APPLICATION OF IMPACT ASSESSMENT TO THE PROCESS OF EUROPEAN INTEGRATION

Introduction

Countries preparing to join the European Union, like the Republic of Macedonia, are faced with enormous task of transforming their economic, social, and legal governmental structures. The countries of central and eastern Europe are doing this in context of their integration into Europe, as well as into the broader context of “Western-style” governance, globalisation, and world trade. The 10 Candidates are currently pursuing a vast strategic project of achieving accession, while others are seeking to achieve Candidate status. All of this places a heavy burden on governments within a relatively short time to develop policy; to draft and pass legislation and regulations; and to build institutions capable of effectively implementing and enforcing them.

There is now a very significant series of interlocking tasks, that include:

- following on from the screening process, preparing the overall negotiating position in detail;
- revising and updating the National Programme for the Adoption of the Aquis on a regular basis;
- implementing the NPAA;
- institution building;
- programming Phare and other assistances;
- communicating with NGO’s and the general public;
- preparing and training the public administration for participation in EU decision-making.

Applicability of Impact assessment to EU accession

It is sometimes said that because joining the EU requires candidate countries to adopt and implement the *aquis communautaire*, impact assessment is pointless since the country has no choice. This is partly true, even there are different ways of bringing a country’s legal framework into line with EU requirements. The reason for this lies in the nature of EU legislation, which takes two main forms:

- *Regulations* must be adopted in their entirety and without amendment by Member states; they are used where complete uniformity is considered necessary to achieve the ends of the legislation.
- *Directives*, in contrast, are much more flexible. They consist of Common Essential Requirements, which must be incorporated into legislation by Member states. However, it is left to Member state to determine precisely how they do this.

It should be noted that the processes and techniques for conducting impact assessment are generally the same with respect to policies and legislation related to European Integration and EU accession as they are with respect to all other policies and legislation. Impact assessment does not replace other processes and strategies for pursuing integration and accession. Its purpose is to contribute to the development and improve the effectiveness of other strategies, and reduce their costs and negative side-effects. The conduct of impact assessment is itself a cost in terms of time delay and human and budgetary resources. In the case of EU accession, the candidate country is being asked to adapt thousands of individual pieces of regulation, as well as much policy in a relatively short time period. It is inconceivable that a country can undertake serious impact analysis of all these

changes. Impact assessment must be carried out in such a way as to identify the crucial areas of impact on the national economy and society and to concentrate impact assessment on these areas. In general, impact assessment should be carried out only when the expected benefits from the results of the assessment can reasonably be expected to outweigh the costs.

How impact assessment can contribute to an effective EU accession process

As was shown in the other chapters, impact assessment is an element of policy development designed to improve the information available to decision-makers. In case of EU accession, impact assessment can assist decision-makers to optimise the process by facilitating the process of prioritisation and sequencing in policy making and the adoption and implementation of the *aquis communautaire*, providing estimates of the costs of different approaches to the implementation of Community policy of measures and therefore to act as part of the evidence needed by government to make policy decisions, providing information on the impact of measures on the public and private sectors in order to provide information on changes which will be required in institutions, management, and production processes, measuring quantitatively the impact of measures on the national budgets and on the financing needs of companies.

*Cost-effective adoption and implementation of the *aquis communautaire**

The preparation for integration in the European Union is a complex exercise in cost minimisation. In spite of what is often said, there is not one way to join the EU, there are many ways. These different ways can have very different impacts on the economy and society. In order to choose the optimal route to the European Union, it is necessary to know what the political, economic, financial, legal and social impact of adopting EU policy and regulation is and what the different ways of implementing specific policy decisions imply for the country.

Less than optimal adoption of EU policy will not only increase costs, but could also decrease the benefits in terms of economic efficiency and competitiveness that are expected from EU accession. To help avoid such consequences, impact assessment can be used to search for approaches that:

- ensure that the implementation of the social aims of the *aquis* do not cause higher than necessary economic costs to the private sector;
- reduce the costs of providing public services to avoid generating tax-related disincentive effects and tax avoidance behavior;
- ensure that the costs and delays to economic actors of obtaining public services and interacting with the administration will not be higher than necessary;
- rely on voluntary compliance, which experience shows is often a cheaper way for industry to comply with EU regulations than administrative control.

For these reasons, impact assessment should be, as much as possible, a regular aspect of the legal harmonisation process. Ministries and Working groups preparing the country's legal instruments to apply the *aquis*, should, to the extent possible, consider in the normal course of their work the impacts of alternative approaches to converting directives into national laws, and identify the costs and benefits of all significant EU legislation.

Institution building

The administrative arrangements and the institutions required by the country to implement the *aquis* are for the most part not prescribed by the EU, but left to each country to design and implement. Given that the *aquis* raises functional issues to be answered rather than prescribing institutional design becomes one of seeking to ensure effective conformity at least cost. This approach opens up a wide range of institutional options. The questions to be answered remain, should particular EU legislation be implemented by modifying existing institutions or by creating new ones? Should the delivery systems be public or private or both? How will delivery systems be

subject to internal and external control? What measures are needed to ensure full public accountability of the specific institutional format decided upon?

Experience shows that the Members of the EU have in fact chosen very different institutional approaches. In designing an implementation approach, the most important question is to decide what to optimise. First, the costs of enforcement efforts, and second, budgetary and economic costs. Using the previously mentioned methods, impact assessment can be a central tool in identifying and measuring these very significant cost and effectiveness implications, both private and public, of alternative institutional design choices.

Impact assessment: Setting priorities

While impact assessment can clearly be a useful tool for EU accession, it is equally true that the quantity for legislation and policy changes required in CEEC's in the process does not allow them to carry out impact assessment of everything, since resources are limited and time is short. The basic principle is that the resources invested in impact assessment should be proportionate to the importance of the issue. Some assessment, however sketchy, should be carried out on any significant piece of EU legislation, but detailed impact assessment should concentrate on crucial subjects. There are at least five ways of identifying legislation that the country might wish to assess more extensively.

- Selection according to the nature and cost of the policy itself
 - The difference between Directives and Regulations, and between product and process.
 - Selection according to the experience of the present 15 EU Member States
 - In many cases, present Candidates can use the experience of Member States to identify areas of the *aquis communautaire* where investment in impact assessment may pay off.
 - Selection using the experience of the previous candidate countries
 - Previous enlargements are not necessarily a good guide to where the main accession problems might lie. The most recent enlargement was Austria, Finland and Sweden, but these countries had relatively few problems adjusting to the *aquis communautaire*, partly because they had already adjusted through EEAA, and partly because they had a level of regulation similar to that in the EU. The accession of Spain and Portugal is perhaps more relevant from the level of development, but these two countries joined 15 years ago, before the 1992 programme for the completion of the internal market had really started. It is of interest to study closely the accession treaties of these different states. For those that started negotiating with the EU in February 2000, it is useful to look at the positions taken by the countries that began negotiations in Spring 1998.
 - Selection based on the experience of officials in line ministries who have been involved in the screening process
 - Officials in line ministries are those in government theoretically best equipped to identify problem areas. They should have a good knowledge of the sectors they are dealing with, and they should be aware of the major problems that their sectors face.
 - Selection through consultation with business, unions and other interest groups in society
- Some of the areas that really need to be fully impact assessed will be apparent to the non-government sector but not to government.

Annex 4: GUIDANCE FOR COMPLETING FINANCIAL IMPACT ASSESSMENT

Purpose of this form

The revised Rules of Procedure of the Government of Macedonia, approved by the Government in April 2001, require that all initiatives submitted to the Government be accompanied by a financial impact assessment and by a commentary from the Ministry of Finance on each assessment. The Rules of Procedure state explicitly that there will be no exception to the requirement to obtain the comments of the Ministry of Finance, even in cases of urgency. These procedures are necessary to enable the Government to exercise proper control of the budget, and are also a key condition of World Bank assistance to the Government.

The Ministry of Finance is required by the Rules of Procedure to comment on 'All materials that have fiscal impact, as well as materials that relate to the allocation of Government funds and financial operations, or materials that define the financial and material liabilities of the state, municipalities, and regulations that contain financial provisions'. In order to enable this analysis to be carried out, the attached form has been devised for completion by Ministries.

The relation of this form to the budget process

It is the duty of the Government to adhere to the Law on the Execution of the Budget unless exceptional circumstances arise. Therefore proposals put forward by Ministries must be resourced from the funds provided in that Law, and within the limits set by that Law. The fiscal impact assessment is the device for ensuring that a proposal accords with the Law, and for assessing the fiscal consequences of the proposal in future years.

In exceptional circumstances, it is necessary for Ministries to ask for additional resources in the course of the budget year, or outside the normal budget-making process. In these exceptional circumstances, the Government must be aware of the full resource implications of requests from Ministries when making decisions on them. In such cases the fiscal impact assessment is the device for identifying those implications.

Procedure to be followed

Ministries must complete the attached form and send it to the Ministry of Finance when it circulates its proposal to other Ministries for comment, in accordance with the Rules of Procedure. Attached to the form are guidance notes on the information to be provided in answer to each question.

It is obviously desirable that the Ministry originating the proposal and the Ministry of Finance should agree as much as possible in their analysis of the fiscal impacts. It may be that the Ministry of Finance will need to request clarification or additional information from the Ministry before it can comment. If that is the case, the staff of the two Ministries are strongly encouraged to liaise directly in order to reach agreement, instead of channelling their communication through the General Secretariat.

Any enquiries about the content of this form should be addressed to [name and telephone number of contact in Ministry of Finance].

Financial Impact Assessment Form

1. Title of proposal	2. Ministry or State Administration Body					
3. Purpose of proposal	4. Type of proposal					
5. Contact name and position	6. Contact details					
7. Activity:

Signature of State Secretary or Agency Head	Day / Month / Year	Signature of Minister	Day / Month / Year	

Notes on Completing the Financial Impact Assessment Form

- 1. Title of proposal** Provide the proposal title in a few words that clearly indicate the subject: e.g., Proposed Amendment to Civil Service Law on Recruitment Process.
- 2. Ministry/State Administration Body** Indicate the name of the ministry submitting the proposal. If the proposal has been prepared by a state administration body (e.g., agency or commission) that reports to the submitting ministry, provide the name of the state administration body in parentheses following the name of the ministry that it reports to. Provide only the name of the state administration body if it reports directly to the Government.
- 3. Purpose of proposal** Indicate whether the proposal being submitted is for decision (approval to introduce legislation, regulations) approved or for information.
- 4. Type of proposal** Indicate whether the proposals being submitted is a draft law, draft amendment, secondary legislation, regulations, concept paper, capital investment proposal, divestment proposal, or other (describe).
- 5. Contact name and position** Provide the name and position of a person who can answer questions on the content of this proposal. These are most likely to be asked by the Secretariat-General of the Government or Ministry of Finance.
- 6. Contact details** Provide the contact's phone number and, if available, e-mail address.
- 7. Activity** State the name of the program or activity if the proposal relates to an existing program or activity.
- 8. Type of Request** Check one or more of the types of request that relate to the proposal.
- 9. Purpose of Request/action Proposed** In one or two sentences, describe the objective of the request.
- 10. Relation to Government Program** In one or two sentences, describe how the proposal supports the government's Program
- 11. Financial Implications** Record estimated costs and revenue implications for the first year and future years. Record total, not incremental, information. The 'Current Year' column should reflect the funding and/or staff required for the remainder of the year only.
- 11A. Total Cost of Proposal** The total cost of the proposal including approved and any additional funding needs.
- 11B. Approved Allocation** The approved level of funds within the program/ activity allotted to

Related to Proposal	the specific proposal.
11C. Change from Approved Allocation	To determine the requested change in level of funding, subtract 'Existing Allocation Related to Proposal' (11B) from 'Total Cost of Proposal' (11A).
11D. Available Expenditure Offset	Identify available expenditure offsets to be considered for the proposal. These offsets can come from another program or activity for which the institution is responsible.
11E. Net Impact on Institution's Allocation	Identify the net impact the proposal will have on the Institution's total allocation. Calculate this amount by subtracting 'Available Expenditure Offset' (11D) from 'Change from Approved Allocation' (11C).
11F. Increase/ Decrease in Revenue Generation	Identify the change in the amount of revenues that will be generated from the proposal.
11G. Additional Sources of Financing or Cost-Sharing	Identify sources and amount of financing other than the state budget, e.g. donor funding.
12. Net Increase/ Decrease in Number of Staff Related to Request	Identify the net increase or decrease on the number of staff (express part-time as a proportion of full-time) that will result from the proposal. Include the staffing impact (if any) resulting from the expenditure offset.
13. What guarantees, loans, or other actual or contingent obligations on the government will be created (if not listed in 11 A to 11 G).	It is important to identify any consequences of the proposal that would create a burden on the budget at a future date. Give details of any guarantees, loans, or other actual or contingent obligations on the government that the proposal would create, if they are not listed in the answers to questions 11 A to 11 G above.
14. If this is a request for additional funding in the current financial year, or outside the normal budget-making cycle, provide justification	Expenditure should be planned through the annual budget process. In planning expenditure, Ministries should adhere to the budget law approved by Parliament. Only when exceptional circumstances arise should requests for additional funding be made. Strong justification should be provided for such requests, since the Government needs to be aware of the full resource implications of such requests when making decisions on them.
15. Date Assessment completed	Provide the date the assessment was authorized by the State Secretary. If no assessment was completed because no fiscal impacts could be identified, provide the date that State Secretary authorized this response.
16. Date Submitted to Ministry of Finance for comments	Provide the date that the fiscal impacts assessment and the proposal were submitted to the Ministry of Finance. It is assumed that these will be provided together.

- | | |
|---|---|
| 17. Date of response from Ministry of Finance | Provide the date that written comments were received by the ministry/state administration body from the Ministry of Finance. |
| 18. Were changes requested by Ministry of Finance? | Indicate (Yes or No) whether the Ministry of Finance requested any changes in the ministry's financial impact assessment. |
| 19. Ministry response | If changes were requested, briefly describe whether the Ministry of Finance's comments are now reflected in the proposal being submitted and in a revised financial impact analysis. If not, explain why. |
| 20. Finance response | Indicate whether the Ministry of Finance is aware of the Ministry's response to its comments and whether it is in agreement with the Ministry's response. |
| 21. Are Ministry of Finance comments attached? | Indicate yes. If the comments are not attached, the proposal should not be forwarded to the Government |
| 22. Approval/Date: | The submission must be signed and dated by the State Secretary (or Agency Head) and Minister, as appropriate. The Minister's signature confirms that he or she supports the proposal and is advising his or her Government colleagues to approve it. The State Secretary or Agency Head's signature indicates that he or she is satisfied that the analysis is correct and complete, and is consistent with the Minister's direction. |
